Art Unit: 3721

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-22, drawn to a foam in bag dispenser system, classified in class 053,
 subclass 122.
- II. Claims 23-41, drawn to a dispenser system, classified in class 053, subclass 237.
- III. Claim 42, drawn to a drive mechanism, classified in class 074.
- IV. Claim 43, drawn to a method of avoiding film wrinkling in a foam in bag dispensing system, classified in class 053, subclass 459.
- IIV. Claim 44, drawn to a method for reciprocating a purge rod in a mixing module, classified in class 074.

The inventions are distinct, each from the other because of the following reasons:

Inventions Groups (IV & IIV) and Groups (I-IV) are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another materially different apparatus such as one without a film feeding device nor a bag forming apparatus.

Inventions Group IIV and Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the

Application/Control Number: 10/623,720

Art Unit: 3721

instant case the different inventions the different invention as defined by the claim of Group IIV neither recites nor requires the invention as defined by the claim of Group IV.

Inventions Groups (I & II) and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the different invention as defined by the claims of Groups (I&II) neither recites nor requires the invention as defined by the claim of Group III.

Inventions Group II and Group I are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because combination does not require to have a dispenser system comprising a drive mechanism. The subcombination has separate utility such as a dispenser system comprising a drive mechanism including a motor and drive transmission in driving communication with both the motor and the rod engagement section.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/623,720

Art Unit: 3721

A telephone call was made to Mr. Dennis Rodgers on 02/11/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sameh H. Tawfik whose telephone number is 571-272-4470. The examiner can normally be reached on Tuesday - Friday from 8:00 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi Rada can be reached on 571-272-4467. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
